LIQUIDTECHNOLOGY

Remote Asset Return Program

Liquid Technology has developed a Remote Asset Return Program to simplify your remote asset recovery process. Our program is sustainable and secure. We help you ship your assets directly from your employees to our secure warehouse. Below is a step-by-step guide explaining the process of our Remote Asset Return Program.
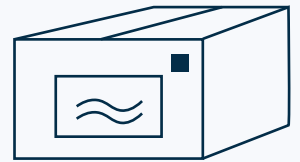

How it Works:

Step 1

Visit *https://liquidtechnology.net/remote-asset-return-program* to complete our online form or email us a spreadsheet with a list of all employees assets that you need to recover.

Step 2

We send each employee listed a box with prepaid shipping labels straight to their door.

Step 3

After employees pack up the assets, the boxes can be arranged for pick-up, or they can drop them off at their local shipping company (UPS or FedEx).

Step 4

We track all the items in transit. And we share the tracking details so you can follow the journey.

Step 5

Once the assets arrive at our secure location, we send you the serial numbers to confirm each asset.

Step 6

After your approval, we process each asset. You can then view the media destruction and inventory reporting via our online portal.

Contact Information

Contact us today and let us take care of removing your unused IT assets and recouping the value of your excess hardware, while strictly adhering to ever-evolving compliance demands.
